Disclosure to Promote the Right To Information

Whereas the Parliament of India has set out to provide a practical regime of right to information for citizens to secure access to information under the control of public authorities, in order to promote transparency and accountability in the working of every public authority, and whereas the attached publication of the Bureau of Indian Standards is of particular interest to the public, particularly disadvantaged communities and those engaged in the pursuit of education and knowledge, the attached public safety standard is made available to promote the timely dissemination of this information in an accurate manner to the public.

NATIONAL FOREWORD

This Indian Standard which is identical with ISO/PAS 17004 : 2005 'Conformity assessment — Disclosure of information—Principles and requirements' issued by the International Organization for Standardization (ISO) was adopted by the Bureau of Indian Standards on the recommendation of the National Mirror Committee of CASCO and approval of the Director General, Bureau of Indian Standards under Rule 8(3)C of *BIS Rules*, 1987.

The text of ISO/PAS Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'.
- b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

Introduction

In 2001 the ISO Council asked its policy committee on conformity assessment (CASCO) to study and prepare a group of common elements for application in future ISO documents on conformity assessment. Subsequent to this request, ISO/CASCO approved the formation of Working Group 23, *Common elements in ISO/IEC Standards for conformity assessment activities*, to undertake this task.

The working group has identified several common elements, including among others

- impartiality (ISO/PAS 17001),
- confidentiality (ISO/PAS 17002),
- complaints and appeals (ISO/PAS 17003),
- disclosure of information (ISO/PAS 17004),
- management systems (ISO/PAS 17005).

In the process of developing ISO/PAS 17002, which addresses the common element of "confidentiality", CASCO Working Group 23 identified the need to elaborate on the related common element of "disclosure of information". This Publicly Available Specification (PAS) addresses the "disclosure of information" element that occurs in many of the ISO/IEC Guides and International Standards on conformity assessment.

This Publicly Available Specification covers the agreed principles that give substance to the element of disclosure of information, and also provides requirements clauses intended to be included in future ISO/IEC International Standards on conformity assessment.

This Publicly Available Specification is intended to apply to the drafting of documents on conformity assessment by ISO/CASCO.

Clause 4 (Background) contains some comments on the importance of disclosure of information to conformity assessment.

Clause 5 (Principles) contains statements that are intended to orientate ISO/CASCO working groups in their task of creating requirements to address disclosure of information in their documents.

The requirements to be inserted into future ISO/CASCO documents that cover the common element of "disclosure of information" are detailed in Clause 6. ISO/CASCO has adopted a common structure for the presentation of requirements. Requirements are grouped under one or more of the following headings:

- a) General requirements;
- b) Structural requirements;
- c) Resource requirements;
- d) Process requirements;
- e) Management system requirements.

As such, each of the common elements will have requirements related to it grouped under one or more of the headings given in a) to e).

This PAS is not intended to become a future International Standard. At the end of three years after the date of publication, it is expected this PAS will be withdrawn and its contents incorporated as appropriate in relevant ISO/CASCO normative and guidance documents.

Indian Standard

CONFORMITY ASSESSMENT — DISCLOSURE OF INFORMATION — PRINCIPLES AND REQUIREMENTS

1 Scope

This Publicly Available Specification (PAS) contains principles and requirements for the element of disclosure of information as it relates to standards for conformity assessment.

It is an internal tool for use in the ISO/IEC standards development process by ISO/CASCO working groups when considering the element of disclosure of information in preparation of their documents.

This Publicly Available Specification is not a standalone normative document to be used directly in conformity assessment activities.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 17000:2004, *Conformity assessment — Vocabulary and general principles*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 17000 apply.

NOTE The use of the term "body" in this Publicly Available Specification means either an accreditation body or a conformity assessment body as defined in ISO/IEC 17000.

4 Background to information disclosure

4.1 Managing the balance between confidentiality and disclosure of information related to fulfilment of requirements affects stakeholders' trust and their perception of value in the conformity assessment activity being performed.

4.2 Legal requirements may provide the basis for what, how and to whom, information associated with conformity assessment activities may be disclosed. The content of this Publicly Available Specification, and the application of any subsequent requirements in CASCO documents, are subservient to the provisions found in those legal requirements.

5 Principles of disclosure of information

The following principles included in the common element of disclosure of information apply to bodies and their activities.

a) Openness:

A body needs to disclose information about its conformity assessment activities to any user.

Subject to relevant legal requirements, the current status of an attestation for any object of conformity that the body has made an assessment of, may be publicly disclosed with the permission of the customer, or in response to a query about the authenticity of a claim by a user.

A body needs to provide access or disclosure to specific interested parties of non-confidential and non-proprietary information about the attestations it has made for specific objects of conformity, in order to gain or maintain confidence in its conformity assessment activities.

b) Access to information:

Any information held by the body on an object of conformity that is the subject of an assessment should, upon request, be made accessible to the person or organization which contracted the conformity assessment body to undertake the conformity assessment activity.

c) Challenging confidentiality and disclosure of information:

An individual or organization should be able to submit a challenge to the body concerning that body's conformity with requirements related to confidentiality and disclosure of information.

6 Requirements for disclosure of information

6.1 General

In developing this Publicly Available Specification, it was recognized that there are varying degrees of specificity that ISO/CASCO working groups should consider. Consequently, the requirements in this clause are categorized into three levels of specificity as follows:

a) Obligatory:

These are specific drafted requirements that shall be used by ISO/CASCO working groups where the element has to be addressed, without modification, except for substitution of more specific terms. For example, the phrase "Conformity assessment activities shall be undertaken impartially", may be substituted more specifically with "Management system certification activities shall be undertaken impartially". Justification is required from ISO/CASCO working groups that do not use these requirements when dealing with the relevant common element.

b) Recommended:

These are drafted requirements that working groups should use if they wished to have a greater degree of specification. Modification is permissible.

c) Suggested:

These are considerations that could be taken into account in the drafting of requirements by the ISO/CASCO working group.

By providing for these different levels of specificity, the Publicly Available Specification achieves the ISO/CASCO intent to have an agreed statement on elements that are common to all conformity assessment activities and, at the same time, maintains some flexibility for specific wording by individual ISO/CASCO working groups.

When formulating requirements that are related to disclosure of information, CASCO working groups should take into account the following aspects:

- whether all information is confidential unless explicitly stated as not being so, or whether all information is considered freely available unless explicitly stated as being confidential;
- in cases where disclosure of information is permitted, the extent to which the conformity assessment body should be obligated to be proactive in disclosing that information (including any obligation to voluntarily inform stakeholders of changes in attestation status);
- whether the organization or person for whom the assessment of the object of conformity was performed needs to be informed of the disclosure of such information.

As an aid to future CASCO working groups, the following text that they shall either use (obligatory requirements) or otherwise incorporate (recommended requirements) in future International Standards is that which is contained in the boxes; the rest of the text is explanatory in nature.

6.2 General requirements — Obligatory requirement

The body, or the issuer of a supplier's declaration of conformity, shall upon request provide a general description of the conformity assessment system and the status of the attestation for objects of conformity it has assessed.

6.3 Process requirements — Recommended requirements

6.3.1 The body shall have a process by which individuals and organizations can complain about, or appeal against, a decision by the body to publicly disclose information or keep it confidential.

6.3.2 In response to any complaint or appeal, the body shall determine whether its original decision remains valid, and shall also provide reasons why it has decided to publicly disclose information or keep it confidential.

Bureau of Indian Standards

BIS is a statutory institution established under the *Bureau of Indian Standards Act, 1986* to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

Copyright

BIS has the copyright of all its publications. No part of the these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Director (Publications), BIS.

Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard alongwith amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the latest issue of 'BIS Catalogue' and 'Standards: Monthly Additions'.

This Indian Standard has been developed from Doc: No. IRD 1 (010).
